Hi, my name is Mirek I'm web developer and I will be working with you.

I have prepared a small website base on the mockup what you've sended to me.
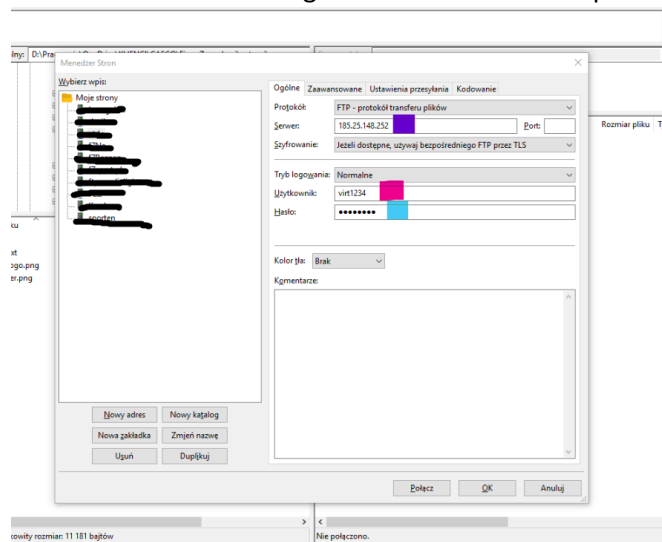

All the files are in folder name "READY".

1. Installation
    a. To install a website on the server you need to have access to *FTP account.* (Ask hosting provider)
    b. Download *ftp client* try **FilleZilla** you can download here : https://filezilla-project.org/
    c. Install **FilleZilla** on your computer and run, click open *Menager* (see red)
    d.
    e. You should see the dialog window. Fill marked input fields
    f.
        i. *Purple – server address usually is ftp.domain.com*
        ii. *Red – user name*
        iii. *Blue – Password*
        iv. *All information you should get from your host provider.*
    g. When you connect to the server you should see **www** folder.
        i. Extract all file from *READY folder to www folder.*
    h. FINISHED

Ask me any question if some trouble.
